

SDS CD TIE™ DRIVE TOOLS

SDS CD Tie Drive Tools for 9mm and 12mm Diameter Ties

SDS adapter for fixing Thor Helical CD remedial wall ties in retrofit applications. Simply slide the red end of the wall tie into drive tool and hammer home using the impact action of a SDS hammer drill.

The unique design of this robust tool allows it to spin around the driving end of the tie to deliver a repetitive hammer fix installation at high speed. It enables safe two-handed drill operation throughout the wall tie fixing and counter-sinking process.

This patented tool is designed specifically to engage the driving shank of the patented CD Ties. Using the tool with another type of helical tie having no drive-shank is dangerous and accordingly orders for the tool will only be accepted from those who intend to use it with genuine Thor Helical ties.
